If your web browser will not load the Google Calendar

In some cases, if you are logged in to a Google account, the Google calendar will not display. You may try logging out of your Google account, and reload the calendar page.

If you still cannot view the calendar, try deleting your history/temporary internet files. To do so in Internet Explorer:

1. Click **Tools** ⚙, and click **Internet Options**
2. On the General tab, under Browsing history, click **Delete**.
3. Check all boxes, but UN-check "Preserve Favorites website data".
4. Click **Delete**.
5. Close Internet Explorer, and then re-launch Internet Explorer.
6. Try the calendar page again
